

Fast broad-spectrum disease control

Banner is an excellent turf fungicide offering fast, highly effective control of a broad spectrum of turf diseases.

- Delivers fast uptake and acropetal systemic movement – gets to work quickly and protects turf as it grows
- Gives excellent control of Dollar Spot, Anthracnose, Brown Patch, Powdery Mildew, Rust and Leaf Spot
- Has preventative, curative and eradicant activity
- Is physically compatible with a range of products, including Daconil Weatherstik
- Is approved for application through boom and knapsack sprayers

syngenta®

Banner is quickly taken up by turf plants, providing fast protection from disease attack and avoiding disruption in mowing schedules. With 1 hour rainfastness, Banner is safe from the effects of wash off by rain and irrigation within an hour of application.

The active ingredient in Banner – propiconazole – provides turf managers with an alternative mode of action for disease control to improve turf quality.

Xylem systemic translocation within the plant quickly moves control activity to the site of infection. Movement up into new leaf growth ensures leaves are protected from new fungal attack.

Best results are achieved from Banner application when the disease is active, but still in the early stage of development, before visible damage to the turf occurs.

Where can Banner be used?

Banner is approved for disease control on all managed amenity turf surfaces.

Banner acts in three ways to minimise the effects of turf diseases:

- **Preventative**
Prevents visible disease damage occurring
- **Curative**
Control disease after infection but before symptoms are expressed
- **Eradicant**
Limits disease spread and aids recovery of new leaf

How does it work?

Banner is a demethylation inhibitor (DMI) fungicide. The biochemical mode of action targets fungal pathogens inside the plant – effectively preventing disease development, by interfering with the biosynthesis of sterols in cell membranes through inhibition of the C-14 demethylation during ergosterol synthesis.

Dose rate	2 l/ha
Pack size	5 l
Water volume	450-1000 l/ha
Active Ingredient	Propiconazole
Rate of AI	250 g/l
Label approved diseases	Dollar Spot Anthracnose Brown Patch Powdery Mildew Rust Leaf Spot (<i>Bipolaris</i> spot)
Activity	Systemic
Application Technique	Boom sprayer Knapsack sprayer

Approved for use on managed amenity turf surfaces:

- Golf courses
- Soccer and rugby pitches
- Bowling greens
- Cricket pitches
- Athletics tracks
